

CLAIM AMENDMENTS

1. (currently amended) A composition comprising the product prepared by heating together:

(a) a dispersant and

(b) 2,5-dimercapto-1,3,4-thiadiazole or a hydrocarbyl-substituted 2,5-dimercapto-1,3,4-thiadiazole which is substantially insoluble in a hydrocarbon oil of lubricating viscosity at 25°C, and ~~further either~~

(c) a borating agent, [[or]] and optionally

(d) an inorganic phosphorus compound, ~~or both (c) and (d)~~,

said heating being sufficient to provide a reaction product of (a), (b), [[and]] (c) [[or]] and optionally (d) which is soluble in said hydrocarbon oil at 25°C.

2. (original) The composition of claim 1 wherein the dispersant is a succinimide dispersant.

3. (original) The composition of claim 1 wherein the dispersant is a Mannich dispersant.

4. (previously presented) The composition of claim 1 wherein the dispersant is an ester-containing dispersant.

5. (original) The composition of claim 1 wherein the dispersant is a viscosity modifier containing dispersant functionality.

6. (original) The composition of claim 1 wherein component (b) is 2,5-dimercapto-1,3,4-thiadiazole.

7. (previously presented) The composition of claim 1 wherein component (b) is a hydrocarbyl-substituted 2,5-dimercapto-1,3,4-thiadiazole wherein the hydrocarbyl group or groups contain a total of less than about 8 carbon atoms.

8. (original) The composition of claim 1 wherein the borating agent is an inorganic borating agent.

9. (cancelled)

10. (original) The composition of claim 1 wherein the inorganic phosphorus compound is phosphoric acid, phosphorous acid or an anhydride thereof.

11. (previously presented) The composition of claim 1 wherein both the borating agent and the inorganic phosphorus compound have been heated with the dispersant and the 2,5-dimercapto-1,3,4-thiadiazole or hydrocarbyl-substituted 2,5-dimercapto-1,3,4-thiadiazole.

12. (currently amended) The composition of claim 1 wherein components (a), (b), and ~~either~~ (c) [[or]] and optionally (d) ~~or both (c) and (d)~~ have been heated together at about 80 to about 200°C for at least about 0.5 hours.

13. (currently amended) The composition of claim 1 wherein components (a), (b), and ~~either (c) [[or]]~~ and optionally (d) ~~or both (c) and (d)~~ have reacted as evidenced by the evolution of H<sub>2</sub>S or H<sub>2</sub>O.

14. (currently amended) The composition of claim 1 wherein components (a), (b), and ~~either (c) [[or]]~~ and optionally (d) ~~or both (c) and (d)~~ are heated together in a hydrophobic medium.

15. (original) The composition of claim 14 wherein the hydrophobic medium is an oil of lubricating viscosity.

16. (previously presented) The composition of claim 15 wherein the oil of lubricating viscosity is retained in the composition.

17. (currently amended) The composition of claim 1 wherein the relative amounts, by weight, of components (a), (b), (c), and (d), prior to heating, are about 100 of (a): (0.75 to 6 of (b)) : ([[0]] 0.075 to 7.5 of (c)) : (0 to 7.5 of (d)), ~~provided that the relative amount of (c) + (d) combined is at least about 0.075.~~

18. (currently amended) The composition of claim 1 wherein the relative amounts, by weight, of components (a), (b), (c), and (d), prior to heating, are about 100 of (a): (1.5 to 3 of (b)) : ([[0]] 1.5 to 4.5 of (c)) : (0 to 4.5 of (d)), ~~provided that the relative amount of (c) + (d) combined is at least about 1.5.~~

19. (currently amended) The composition of claim 1 wherein the reaction product comprises about 0.5 to about 2.5 percent by weight S derived from component (b) and ~~either about 0.2 to about 0.6 percent by weight B from component (c), or about 0.3 to about 1.1 percent by weight P from component (d), or said amounts from both components (c) and (d),~~ on an oil free basis.

20. (original) A composition comprising an oil of lubricating viscosity and the reaction product of claim 1.

21. (original) The composition of claim 20 wherein the amount of the reaction product is about 0.5 to about 90 percent by weight of the composition.

22. (previously presented) The composition of claim 21 wherein the amount of the reaction product is about 0.5 to about 5 percent by weight.

23. (previously presented) The composition of claim 21 wherein the amount of the reaction product is about 20 to about 90 percent by weight.

24. (original) A method for lubricating a mechanical device, comprising supplying thereto the composition of claim 20.

25. (original) The method of claim 24 wherein the mechanical device is an internal combustion engine.

26. (original) The method of claim 24 wherein the mechanical device is an automatic transmission.

27. (currently amended) A method for preparing a composition comprising heating together a mixture of:

(a) a dispersant and

(b) 2,5-dimercapto-1,3,4-thiadiazole or a hydrocarbyl-substituted 2,5-dimercapto-1,3,4-thiadiazole which is substantially insoluble in a hydrocarbon oil of lubricating viscosity at 25°C, and ~~further either~~

(c) a borating agent ~~[[or]]~~ and optionally

(d) an inorganic phosphorus compound, ~~or both (c) and (d),~~

said heating being sufficient to provide a reaction product of (a), (b), ~~[[and]]~~ (c) ~~[[or]]~~ and optionally (d) which is soluble in said hydrocarbon oil at 25°C.

28. (new) A composition comprising the product prepared by heating together:

(a) a dispersant and

(b) 2,5-dimercapto-1,3,4-thiadiazole or a hydrocarbyl-substituted 2,5-dimercapto-1,3,4-thiadiazole which is substantially insoluble in a hydrocarbon oil of lubricating viscosity at 25°C, and

(c) boric acid, and optionally

(d) an inorganic phosphorus compound,

said heating being sufficient to provide a reaction product of (a), (b), (c) and optionally (d) which is soluble in said hydrocarbon oil at 25°C.

29. (new). The composition of claim 28 wherein a mixture of components (a), (b), and (c), and optionally (d) is heated together.
